ACADEMIC POSITIONS

2020–present — **Senior Lecturer (Assistant Professor) of Computer Science**.
Ben-Gurion University of the Negev, Be'er Sheva, Israel

2017–2020 — **Assistant Adjunct Professor of Mathematics**.
University of California Los Angeles, California

EDUCATION

2011–2017 — **Ph.D. in Computer Science**.
Technion–Israel Institute of Technology, Israel
Dissertation: *Operator Representations in Geometry Processing*
Committee: Mirela Ben-Chen, Yaron Lipman, Ron Kimmel

2005–2010 — **B.Sc. in Computer Science and Mathematics**.
Technion–Israel Institute of Technology, Israel

RESEARCH INTERESTS

Sequential modeling, machine learning, deep learning, dynamical systems, differential geometry, Koopman theory.

RESEARCH DIRECTIONS

Representation learning [18, 20, 23] deals with encoding complex high-dimensional information in a meaningful way for various downstream tasks. Our research focuses on disentangling data to its underlying explanatory factors, where we achieved state-of-the-art results on sequential disentanglement.

Generative modeling [22] aims to capture the statistical distribution of data for sampling new examples using machine learning tools. Our work demonstrates state-of-the-art performance on the fundamental challenge of generative modeling of regular and irregular time series data.

Understanding neural networks [17, 21] and their inner mechanisms is necessary for modern machine learning frameworks. We developed techniques based on dynamical systems and differential geometry to characterize the latent manifolds of learned representations. Through these tools, we gained fundamental insights on learning.

Forecasting [12, 13, 14, 24] future sequences from past observations is essential in numerous science and engineering domains. We suggested forecasting frameworks leveraging recurrent neural networks, differential geometry, and dynamical systems.
